

Internet Victim Information System (IVIS)

The Problem

Timely notification can mean the difference between life and death for victims and witnesses of crimes. Across the country, strict laws protect the rights of crime victims to know of changes in their cases. Despite this growing awareness, vital information often slips through the cracks, leaving crime victims uninformed and compromising their safety.

The ASG Solution

IVIS, or the Internet Victim Information System, is a superior digital solution for providing critical information to victims of crime. State-of-the-art technology automatically notifies crime victims of events in their cases. IVIS connects agencies into a seamless victim service network and offers features to ease case workloads.

Developed in close cooperation with victim service providers, IVIS is a peerless solution for crime victim information. It aids justice agents by helping to share vital data among agencies and by speeding critical information to the public they serve.

IVIS is an even stronger solution when packaged with I-CRIS in JustIS, the Justice Information Suite. JustIS links IVIS to I-CRIS, a powerful system that integrates criminal records. JustIS allows a seamless flow of data from agencies to crime victims. When agencies record any number of important actions, I-CRIS works with IVIS to send immediate notice to the people who need to know.

Features

Victim Notification. Automates contact by phone, letters, and e-mail

Information Service. Offers phone and web access anytime

Scalability. Accommodates any number of agencies

Tool Pack. Helps manage cases and produce reports

Privacy. Requires identification to access sensitive information

Advanced Notification Solutions

Advanced Notification Solutions

IVIS Benefits

Cooperative.

Helps agencies quickly share appropriate information

Secure.

Uses secure protocols, encryption, passwords, and activity logs

Flexible.

Allows rapid modification and data export to other systems

Easy to Use.

Offers intuitive design with web browser simplicity

Low Cost.

Uses web technology to reduce equipment needs

Proven.

Used by numerous agencies in different states
